Thank you for purchasing TOA’s Wall Mount Speaker. Please carefully follow the instructions in this manual to ensure long, trouble-free use of your equipment.

1. SAFETY PRECAUTIONS

- Before installation or use, be sure to carefully read all the instructions in this section for correct and safe operation.
- Be sure to follow all the precautionary instructions in this section, which contain important warnings and/or cautions regarding safety.
- After reading, keep this manual handy for future reference.

![WARNING]

Indicates a potentially hazardous situation which, if mishandled, could result in death or serious personal injury.

- As a force of approx. 18 kg (39.68 lb) is applied to the speaker receptacle at the time of speaker installation, attach it in a location durable enough to withstand the force. Doing otherwise may result in the unit falling down, causing personal injury.
- Do not use other methods than specified to mount the bracket. Extreme force is applied to the unit and the unit could fall off, possibly resulting in personal injuries.
- Use nuts and bolts that are appropriate for the wall’s structure and composition. Failure to do so may cause the speaker to fall, resulting in material damage and possible personal injury.
- Ensure that all screws are securely tightened. If they are loose after installation, the unit could fall down, possibly resulting in personal injury.

![CAUTION]

Indicates a potentially hazardous situation which, if mishandled, could result in moderate or minor personal injury, and/or property damage.

- To avoid electric shocks, be sure to switch off the amplifier’s power when connecting speakers.
- Do not operate the unit for an extended period of time with the sound distorting. This is an indication of a malfunction, which in turn can cause heat to generate and result in a fire.
- Do not stand or sit on, nor hang down from the unit as this may cause it to fall down or drop, resulting in personal injury and/or property damage.

2. FEATURES

- Thin type wall mount speaker with 5" cone speaker unit
- Two-way speaker system employing a balanced dome tweeter and elliptical horn for high-frequency sound reproduction in combination with a 5" cone speaker unit ensures high-quality sound. (BS-1034 and BS-1034S)
- The speaker’s smoothly curved surface in combination with its straight lines permits it to blend in with virtually all modern buildings.
- Equipped with a speaker receptacle, providing speaker cable connection and installation ease.
- Equipped with a lock mechanism, preventing the speaker from being detached easily after installation.
- In-wall wiring, exposed wiring, or bridge wiring available for speaker cable connection
- The input power (impedance) can be easily changed by the rear-mounted rotary switch. (BS-1034 and BS-1034S)

3. WIRING DIAGRAMS

3.3. BS-1034 and BS-1034S

Note
Never make 500 Ω connection in a 100 V line system.

[Diagram showing wiring connections and rotary switch settings for BS-1034 and BS-1034S]
4. CONNECTION

Connect the speaker cable to the supplied speaker receptacle. Connections differ depending on the speaker to be installed. Read the descriptions of the corresponding model.

4.1. BS-634 connection

The input power is set to 6 W (100 V line) by connecting the Hot line to the N-terminal, and 3 W (100 V line) by connecting it to the R-terminal.

5. INSTALLATION

Step 1. Attach the speaker receptacle to a wall.

- If the supplied tapping screws are not appropriate for the construction of wall, separately prepare the appropriate screws.
- Install the speaker receptacle referring to its "UP" mark.
- Position the receptacle at the specified distance away from any object above and below it for vertical speaker mounting. Keep the same distance to the right and left of the receptacle (positioned sideways) for horizontal speaker mounting.

[Notes on horizontal speaker mounting]
- Even if the speaker receptacle is attached horizontally, the speaker may be tilted due to its weight unbalance when attached to the receptacle.
- When changing the logo direction, peel off the logo carefully as it is affixed using double-faced tape. Then, re-affix it in the right orientation.

[Exposed wiring]
Notch the top of the speaker receptacle using long-nose pliers, then make connections.

4.3. BS-1034 and BS-1034S connections

- Split the speaker cable into 2 branches just before it enters the speaker receptacle so that it can be routed in the cable-guide groove on the rear side of the speaker.
Step 2. Change the input power (impedance) as needed. (BS-1034 and BS-1034S only)
The input power (impedance) is factory-preset to 10 W (1 kΩ) for 100 V line.
When changing this setting, use a standard screwdriver to turn the rotary switch on the speaker's rear panel to the desired position.

**Note**
Be sure to follow the instructions below. Failure to do so may cause damage to the speaker as excessive input power is applied to it.
- Switch off the amplifier's power when changing the input power.
- Never make 500 Ω connection in a 100V line system, as excessive input power is applied to the speaker, possibly resulting in damage.

Step 3. Hold and slide the speaker to insert its speaker plug into the speaker receptacle.

**Note**
In this case, force the speaker onto the speaker receptacle holding the speaker outer frame.

Step 4. Secure the speaker.
Turning the lock screw approximately about 3 counterclockwise turns using a Phillips screwdriver causes the flap to rise up and stay upright.

**Caution**
After speaker installation, be sure to make a visual check that the flap rises to lock the speaker completely.

### About lock mechanism
The lock mechanism is as shown below. It prevents the speaker from being detached easily after installation.

**Note**
Be sure to follow the instructions below. Failure to do so may cause damage to the lock mechanism.
- Do not use an electric screwdriver when turning the lock screw.
- Do not turn the lock screw more than the specified turns.

Step 1. Turn the lock screw approximately 3 clockwise turns.
The flap lies down and stays laid. (Refer to "About lock mechanism.")

Step 2. Hold and slide the speaker to unplug it from the speaker receptacle.

### When fixing the speaker
Turning the lock screw counterclockwise causes the flap to rise up and move until it stops against the other side of the recess.

### When detaching the speaker
Turning the lock screw clockwise causes the flap to lie down and move until it stops against the front side of the recess. (Factory preset position)
8. SPECIFICATIONS
