LE'CAM'BIO

Integrated Audio Collaboration System with DSP + KD-CAMUSB

LE'CAM'BIO consists of our LENUMBIO audio collaboration system, along with Key Digital's KD-CAMUSB camera & KD-CX800 controller, to improve conference focus, while eliminating operational distractions. LENUMBIO LED indicators identify and track the presenter's location, in addition to showing mute status, and microphone gain level. The KD-CX800 uses LENUMBIO's real-time, beam steering technology, to automate the KD-CAMUSB's movement to focus on the speaker. Equipment set-up and control is available for both products via iPad with either a Crestron, Extron, or AMX controller module for the LENUMBIO, and the Compass Control Pro app for the KD-CAMUSB. The user only needs to connect a single, USB connection via a compatible host device to experience conferencing to the next level!

REAL-TIME BEAM STEERING ILLUMINATED

Seven LED indicators behind the front grille illuminate to visually track presenter location, display microphone gain level, and show microphone mute status.

GUI FOR EASY SETUP AND CONTROL

The browser interface is available to make adjustments to parameter settings such as mixer volume controls, audio processing, LED indicator management, control I/O, presets, and voice tracking field adjustments for coverage within a 20 foot range.
